

# Mobile Plug and Play Technology

Now adding a new card is a snap.

*Today's Plug and Play notebook computers make it easy to add multimedia, video, remote Internet access, and the latest fax and networking technologies. Just pop in the right card and Plug and Play technology takes care of the rest. There's no more hassling with complicated configuration procedures. You're free to start using your new capabilities immediately.*

## User Benefits:

- Add new capabilities without complicated configuration procedures
- Adopt new technologies quickly and easily
- Upgrade to latest versions or faster speeds instantly
- Pop in PCMCIA "hot plug" cards without rebooting

Plug and Play technology makes the installation of faxmodem, LAN adapter and other cards fast and hassle-free. Pop in the card and your system will be configured automatically and optimized for maximum performance with that card. Now you can enjoy the latest add-on innovations without worrying about com ports, interrupts and DMA channel conflicts. What's more, because the installation is so easy, you save the time and money you ordinarily spend calling customer support for answers or getting help from your retailer.

Other Plug and Play advantages include quick upgrades to the latest technology and the easy interchange of cards within a slot. PCMCIA cards have "hot plug" capabilities that allow you to insert or exchange cards without rebooting or shutting your notebook down. That means if you were on the road, you could pull out your LAN adapter card and insert a faxmodem card without missing a beat. In seconds, you could be sending a fax or online.
